## ABOUT US

Information Security SUMMIT (ISS), the Midwest's largest gathering of security professionals, began as a homegrown idea by two corporate IT managers to elevate Cleveland's vibrant thought leadership in cybersecurity. In 2002, Gary Sheehan and Glenn Brzuzewski, who were both working in IT Security services, came up with the idea to create a local, all-volunteer security conference that created a space for professionals to learn without the barriers of cost or time to attend out-of-state conferences.

ISS gained traction immediately, with support and participation from the top IT security companies in the region and a host of cross-sector volunteers. Gary and Glenn's entrepreneurial idea to educate, collaborate, and evolve the local security community thrived amidst growing global threats of Cybersecurity and Denial of IT services, expanding to the most significant and most crucial cybersecurity gathering in the Midwest. ISS's idea came out of a meeting at Ohio Peace Officer's Training Academy in 2001, and the ISS IT Security conference started in 2002.

**2022 ISS is returning to LaCentre!**
