The 23rd Information & AI Security SUMMIT Sells Out for Fifth Consecutive Year! ISS+ STRIVES TO ADVANCE LESS CHAOTIC IT/AI SECURITY

CLEVELAND, OH: In today's rapidly progressing world of artificial intelligence, Data Directors, Network Administrators, Law, Finance, and Risk Management professionals are inundated with information technology. For the Fifth straight year, ISS has SOLD OUT in attendance and sponsorship, proving Northeast Ohio's advanced engagement in regional enterprise progress.

The 23rd Annual Information & AI Security Summit (ISS +) was born out of necessity, when two IT security managers' request to attend an IT conference was denied, as their absence would leave their department without coverage. In response, they established one of the first regional IT security conferences in their hometown.

They invited their top vendors, industry associates, and local advocacy groups to an ad-hoc conference featuring the latest best IT security practices, wrapped in a two-day event that fostered community-building connections. As the event progressed, ISS expanded its scope to national speakers and, recently, global thought leaders.

"The 23rd Annual Information & AI Security SUMMIT is more than a conference (hence the name ISS+)," stated Gary Sheehan, one of the two founders and current ISS Executive Director. "ISS hosts a Guardian appreciation Golf Outing, a Chief Security Officer Exchange (CSO Xchange), Certification Courses, CyberIdea, a chance for innovators to industry-check an inkling, ISS Podcast Studio, and E-recycling Days, community-involved on-site Asset Remarketing and Recycling of used electronics."

Initially, IT security advances were unveiled in the first half of the year at annual national 'shows'.

Regional conferences serve as backup to those events, serving as a resource for individuals who were unable to attend, recent graduates, and those seeking to establish professional connections, as well as supporting the ever-growing IT department's education.

Regional Cybersecurity conferences, such as ISS, serve as a role model for 'version updates' and 'resilience' in ever-evolving processes, procedures, applications, resources, and products. The 23rd ISS+ Week takes place from October 27th to October 31st in Westlake, OH. The annual Information & AI Security SUMMIT is held during the last full week in October, CISA's Cybersecurity Awareness Month.
